CV

Creative and driven biologist & nature enthusiast

I am a Master's student in microbiology, focusing mainly on fungi. In my spare time, I explore their potential in creating more sustainable food systems, whereas my research is focused on using molecular methods to discover hidden mould in buildings. Apart from that, I love taking pictures and getting lost in deep thought on the nature of reality.

Education

- **2025–2026** — Master of Science in Ecology (GPA: 3.8), Department of Biology, Copenhagen University, Denmark
- **2025** — PhD Course in Geometric Morphometrics in R, PhD School of Science, Copenhagen University, Denmark
- **2021–2025** — Bachelor of Science in Biology (GPA: 3.1), Department of Biology, Copenhagen University, Denmark

Work Experience & Volunteering

- **2026–now** — Volunteer at Green Peace Denmark
- **2026** — Photographer for the Biodiversity Symposium in Copenhagen
- **2025–now** — Student Assistant at the Indoor Climate Lab at Rambøll Danmark A/S, working with analysis of mould, tree-degrading fungi, and fungal toxicity
- **2025** — Student assistant for the MSc course "Field Mycology and Identification of Fungi" with leading experts Jacob Heilmann-Clausen and Thomas Læssøe
- **2024–now** — Guided mushroom tours for FLOR (Danmarks Naturfredningsforening); mycology tutoring, photography, and fungal breeding
- **2024–now** — Member of the Social and Symbiotic Evolution Group
- **2021–2023** — Volunteer at Grøn Agenda Sydhavn, which manages 18,200 m² on Sydhavnstippen in Copenhagen with the aim of increasing biodiversity
- **Earlier** — Several non-biology positions. Prior to a career shift, I worked as a full-time boarding school teacher, part-time freelance acrobatics teacher, and a circus arts school board member. My main work was establishing inclusive movement-based communities.

Research Experience

- **2026–now** — Using molecular methods to reveal hidden mould growth in buildings
- **2026** — Innovation project focused on fungal breeding techniques
- **2025** — Growth experiments with uncultivated *Termitomyces* by replication of a 3D growth chamber
- **2024** — Project in practice at Funga Farm, researching a fungal pathogen affecting yields of *Pleurotus ostreatus*

Presentations & Outreach

- **2026** — Pitch-training session at the joint Biotech Research & Innovation Centre and Bioinformatics Institute seminar on fungal breeding techniques
- **2025** — **Carpentier, P.S.**, Kristian, B., Zhu, D., Schmidt, S., Rosendahl, S., Hipsley, C., and Poulsen, M. — *From 2D plates to 3D structures: Does termite-farmed Termitomyces need three dimensions to grow?* Status report at the UCPH Microbiology Day
- **2025** — **Carpentier, P.S.**, Zhu, D., Schmidt, S., Rosendahl, S., Hipsley, C., and Poulsen, M. — *From 2D plates to 3D structures: Does termite-farmed Termitomyces need three dimensions to grow?* Poster presentation at the Danish Microbiological Society yearly convention
- **2024** — Fungus-farming and entomopathogenic termite stand at Fungi Festival and Culture Night

Grants & Funding

- **2026** — Rambøll Danmark A/S internal accelerator platform (50,000 DKK)
- **2025** — Rambøll Danmark A/S master's thesis pitch for building physics department head (50,000 DKK)
- **2025** — Danish Mycological Society "Mushroom Grant" — travel grant for Tropical Field Mycology Course (8,000 DKK)
- **2024** — Danish Mycological Society "Mushroom Grant" for personal microscope and microscopy supplies (7,000 DKK)
- **2024** — UCPH Microbiology Cluster grant for interdisciplinary research projects (30,000 DKK)
